A House on Four Wheels

Is travelling becoming easier?

Have you ever wondered how to combine love of travelling with joy of spending time in your own house?

Many people like visiting new places but it means leaving their houses for a period of time. However, some individuals found a way of how to take a house with them. They built a house that moves on wheels.

A house on four wheels can be transported very easily from one place to another using a car.

Such building gain more and more popularity as it is made from solid materials and has everything which is needed for daily functioning. You can choose between a tiny cottage and a quite big apartment. This type of flat can have even three bedrooms which are not so small. It can accommodate a large bed, a spacious wardrobe or even a desk. It can be up to 45 square meters.

You can live in a four-wheeled flat in winter without worrying that it is cold. The apartments are very often insulated with several centimetres of foam. In addition, all rooms can be equipped with heaters.

The house is also relatively cheap. The price varies between 30 000 PLN and 90 000 PLN.

Thanks to mobile homes travelling becomes cheaper because you do not have to pay for the room. If someone is a fan of living on the road, return of investment can be expected within a few years.

And you? Would you live in such a house?

Written by Jan Kłobukowski

Do you know that?

In 1904 Michał Drzymała, Polish farmer, was forced to buy a house on wheels because the Prussian government did not allow him to build it on his land.

Fall was coming, and heating became the priority. Drzymała bought an old circus car which cost 350 marks. He managed to transport the car to the plot with nearby residents' help and notified the authorities about this fact.

However, he was ordered not to keep his car in one place for more than 24 hours. As a consequence, Michał was moving his car a bit further every day.

This way Drzymała became a hero, a symbol of the fight against the invader.
